Date: June 4, 2004

Non-Final Office Action, an extension of time is not required to permit filing and/or entry of an additional amendment after expiration of the shortened statutory period.

If a timely response has been filed after a Final Office Action, an extension of time is required to permit filing and/or entry of a Notice of Appeal or filing and/or entry of an additional amendment after expiration of the shortened statutory period unless the timely-filed response placed the application in condition for allowance. Of course, if a Notice of Appeal has been filed within the shortened statutory period, the period has ceased to run." Notice of December 10, 1985 (1061 O.G. 34-35).

NOTE: See 37 C.F.R. Section 1.645 for extensions of time in interference proceedings, and 37 C.F.R. Section 1.550(c) for extensions of time in reexamination proceedings.

3. The proceedings herein are for a patent application and the provisions of 37 C.F.R. Section 1.136 apply.

(complete (a) or (b), as applicable)

- (a) ☐ Applicant petitions for an extension of time under 37 C.F.R. Section 1.136 (fees: 37 C.F.R. Section 1.17(a)(1)-(4)) for the total number of months checked below:

	Extension (months)	Fee for other than small entity	Fee for small entity
<input type="checkbox"/>	one month	\$ 110.00	\$ 55.00
<input type="checkbox"/>	two months	\$ 420.00	\$ 210.00
<input type="checkbox"/>	three months	\$ 950.00	\$ 475.00
<input type="checkbox"/>	four months	\$ 1,480.00	\$ 740.00

Fee: \$ _____

If an additional extension of time is required, please consider this a petition therefor.

(check and complete the next item, if applicable)

- ☐ An extension for _____ months has already been secured. The fee paid therefor of \$ _____ is deducted from the total fee due for the total months of extension now requested.

Extension fee due with this request \$ _____

OR

- (b) ☒ Applicant believes that no extension of term is required. However, this conditional petition is being made to provide for the possibility that applicant has inadvertently overlooked the need for a petition for extension of time.

FEE FOR CLAIMS

4. The fee for claims (37 C.F.R. Section 1.16(b)-(d)) has been calculated as shown below

(Col.1)	(Col. 2)	SMALL ENTITY			OR	OTHER THAN A SMALL ENTITY	
Claims Remaining After Amendment	Highest No. Previously Paid For	Present Extra	Rate	Addit. Fee		Rate	Addit. Fee
			\$9.00	\$		\$18.00	\$
Independent Claims Remaining After Amendment	Highest No. Previously Paid For		\$43.00	\$		\$86.00	\$
First Presentation of Multiple Dependent Claim+			\$145.00	\$		\$290.00	\$
						Total Addit. Fee	\$

* If the entry in Col. 1 is less than the entry in Col. 2, write "0" in Col. 3,

** If the "Highest No. Previously Paid For" IN THIS SPACE is less than 20, enter "20".

*** If the "Highest No. Previously Paid For" IN THIS SPACE is less than 3, enter "3".

The "Highest No. Previously Paid For" (Total or Indep.) is the highest number found in the appropriate box in Col. 1 of a prior amendment or the number of claims originally filed.

WARNING: *"After final rejection or action (Section 1.113) amendments may be made canceling claims or complying with any requirement of form which has been made." 37 C.F.R. Section 1.116(a) (emphasis added).*

(complete (c) or (d), as applicable)

(c) ☒ No additional fee for claims is required.

OR

(d) ☐ Total additional fee for claims required \$ _____.

FEE PAYMENT

5. ☐ Attached is a check in the sum of \$ _____.
- ☐ Charge Account No. _____ the sum of \$ _____.
- A duplicate of this transmittal is attached.

FEE DEFICIENCY

NOTE: *If there is a fee deficiency and there is no authorization to charge an account, additional fees are necessary to cover the additional time consumed in making up the original deficiency. If the maximum, six-month period has expired before the deficiency is noted and corrected, the application is held abandoned. In those instances where authorization to charge is included, processing delays are encountered in returning the papers to the PTO Finance Branch in order to apply these charges prior to action on the cases. Authorization to charge the deposit account for any fee deficiency should be checked. See the Notice of April 7, 1986, (1065 O.G. 31-33).*

6. [X] If any additional extension and/or fee is required, charge Account No. 04-1105.

AND/OR

[X] If any additional fee for claims is required, charge Account No. 04-1105.

Date: June 4, 2004

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 December 2000.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,3-7,10-16,18-23 and 25-30 is/are rejected.
- 7) ☒ Claim(s) 2,8,9,17 and 24 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

DETAILED ACTION

1. Claims 1-30 are presented for Examination. The results of the examination are the followings.

Drawings

2. Figures 14A, 14B, 14C, and 15 should be designated by a legend such as **--Prior Art--** because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

RECEIVED

JUN 10 2004

Specification

Technology Center 2600

3. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

4. The abstract of the disclosure is objected to because it contains more than 150 words.

Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claim 1, 3-7, 10-16, 18-23, and 25-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ueno et al (US 6,320,562) in view of Yoshida et al (US 6,496,170).

As per claim 1, Ueno et al teach an STN liquid crystal display device including a plurality of row electrodes and a plurality of column electrodes 8U and 8L, a scanning voltage being applied to each of the plurality of electrodes 7, a signal voltage from the selector circuit 6 applied to each of the plurality of column electrodes, and the plurality of row electrodes intersecting the plurality of column electrodes. Further, Ueno et al teach determining, for each of the plurality of column electrodes, compensation arithmetic circuit 5 (correction data or voltage) for correcting the signal voltage based on the amount of an increase or decrease in a root-mean-square (RMS) voltage (i.e. effective voltage value) between the plurality of row and column

electrodes, applying a compensation arithmetic circuit 5 (correction data or voltage) to a plurality of column electrodes 8U and 8L in accordance with the compensation arithmetic circuit 5 (correction voltage) (col. 22, lines 36-41 and 64-66, see fig. 1). Ueno et al teach two kinds of cross-talk caused by a changed in a data voltage waveform (blunt waveform) i.e. waveform caused by waveform distortion and cross-talk from distortion induced toward the side of the row electrodes (col. 22, lines 20-24, see fig. 1). Ueno et al do not teach applying a correction voltage wherein there an increment or decrement of an effective voltage value as claimed but Yoshida et al teach a signal voltage correction circuit 79 that is set to supply a data signal voltage including the voltage decrement ΔV_{IR} according to the formula (4) depending on a prescribed image data (col. 22, lines 57-60, fig. 7).

It would have been obvious to one of ordinary skill in the art to utilize the signal voltage correction circuit that uses voltage decrement as taught by Yoshida et al into the device of Ueno et al because it would provide a liquid crystal display apparatus capable of improving image qualities, particularly for gradational display, such as a contrast, while retaining a high-speed responsiveness at the time of effecting the display (col. 3, lines 27-31).

As per claim 3, Ueno et al teach a compensation arithmetic circuit that is determined based on a position of each of the plurality of column electrodes as claimed (see fig. 1, 5, 8U, 8L).

As per claim 4, Ueno et al teach detecting a change in the voltage applied to each of the column electrodes to be inherently a digital amount and outputting the digital amount to each of the plurality of column electrodes through the compensation circuit 5 (col. 8, lines 7-16).

As per claims 5, a method wherein an increment or decrement of the effective voltage value is an increment or decrement of an effective voltage value due to an induced distortion of the scanning voltage (col. 22, lines 19-41), and step c) further comprising the step of detecting, for each of the plurality of column electrodes, a change in the signal voltage based on a row driver control signal, and n^{th} row display data and $(n-1)^{\text{th}}$ row display data (see fig. 1, 71, 72).

As per claim 6, Ueno et al teach detecting a change in the signal voltage for each of the plurality of column electrodes, a look-up table 52 (LUT) seen in figure 3 that does the calculation for each of the plurality of column electrodes an induced distortion correction amount based on the induced distortion count value representing the total change in the signal voltage over the plurality of column electrodes (col. 22, lines 19-41, see fig. 1, 7, 8U, 8L).

As per claim 7, Ueno et al teach a look-up table 52 (LUT) seen in figure 3 that does the calculation for each of the plurality of column electrodes an induced distortion correction amount based on the induced distortion count value and a lateral position count value representing a position of each of the plurality of column electrodes in a lateral direction as claimed along the plurality of row electrodes (col. 22, lines 19-41, see fig. 1, 7, 8U, 8L).

As per claims 10-12, a method wherein an increment or decrement of the effective voltage value is an increment or decrement of an effective voltage value due to blunt waveform of the scanning voltage and based on the signal voltage (col. 22, lines 19-41), and step c) further comprising the step of detecting, for each of the plurality of column electrodes, a change in the signal voltage based on a row driver control signal, and n^{th} row display data and $(n-1)^{\text{th}}$ row display data (see fig. 1, 71, 72).

As per claim 13, Ueno et al teach a liquid crystal display comprising a compensation arithmetic circuit 5 (correction data or voltage) capable of performing two-way gray-scale display (gradation phenomenon) including a gray-scale display by frame based on a lateral position count value representing a position of the plurality of column electrodes along the plurality of row electrodes as claimed (col. 22, lines 9-18, see fig. 1, 7, 8U, 8L).

As per claims 14 and 15, Ueno et al teach a liquid crystal display whose gray-scale process is pulse width modulation (width and amplitude) for each compensation arithmetic circuit (correction voltage) used (col. 22, lines 12-18).

As per claim 16, it is an apparatus claim corresponding to the method claim 1 and is therefore rejected on the same basis set forth in claim 1.

As per claim 18, it is an apparatus claim corresponding to the method claim 3 and is therefore rejected on the same basis set forth in claim 3.

As per claim 19, it is an apparatus claim corresponding to the method claim 4 and is therefore rejected on the same basis set forth in claim 4.

As per claim 20, it is an apparatus claim corresponding to the method claim 5 and is therefore rejected on the same basis set forth in claim 5.

As per claim 21, it is an apparatus claim corresponding to the method claim 6 and is therefore rejected on the same basis set forth in claim 6.

As per claims 22 and 23, they are apparatus claims corresponding to the method claims 7 and 8 and are therefore rejected on the same basis set forth in claims 7 and 8.

As per claims 25-27, they are apparatus claims corresponding to the method claims 10-12 and are therefore rejected on the same basis set forth in claims 10-12.

As per claim 28, it is an apparatus claim corresponding to the method claim 13 and is therefore rejected on the same basis set forth in claim 13.

As per claim 29, it is an apparatus claim corresponding to the method claim 14 and is therefore rejected on the same basis set forth in claim 14.

As per claim 30, it is an apparatus claim corresponding to the method claim 15 and is therefore rejected on the same basis set forth in claim 15.

Allowable Subject Matter

8. Claims 2, 8, 9, 17, and 24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art, Ueno et al, discloses conventional liquid crystal display and a method of applying a compensation voltage for correcting the voltage applied to the column electrodes, either singularly or in combination, teaches or even suggests:

As per claim 2, a method wherein the correction voltage is applied to each of the plurality of column electrodes in a correction period, and the correction period is equal to m horizontal scanning periods is provided in L horizontal scanning periods where L is an integer greater than or equal to 2 and m is an integer more than 0 and less than L .

As per claim 8, a method wherein step d) further comprises the steps of:
calculating an induced distortion correction variable based on the lateral position count value and a frame number; and

calculating the induced distortion correction amount based on the induced distortion correction variable and the induced distortion count value.

As per claim 9, a method wherein the correction voltage is applied to each of the plurality of column electrodes in a correction period, and the correction period equal to m horizontal scanning periods where L is an integer greater than or equal to 2 and m is an integer more than 0 and less than L , and

step a) further comprises the step of adding or subtracting an error between the correction data and the induced distortion correction amount, the correction data being applied to each of the plurality of column electrodes, to or from an induced distortion correction amount corresponding to a next correction period.

As per claim 17, a device further comprising a timing control circuit for providing a correction period, wherein the correction voltage is applied to each of the plurality of column electrodes in the correction period, and the correction period equal to m horizontal scanning periods is provided in L horizontal scanning periods where L is an integer greater than or equal to 2 and m is an integer more than 0 and less than L .

As per claim 24, a method wherein the correction voltage is applied to each of the plurality of column electrodes in a correction period, and the correction period equal to m horizontal scanning periods where L is an integer greater than or equal to 2 and m is an integer more than 0 and less than L , and

the correction operation circuit further comprises an adding or subtracting an error between the correction data and the induced distortion correction amount, the correction data

being applied to each of the plurality of column electrodes, to or from an induced distortion correction amount corresponding to a next correction period.

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Francis (US 5,841,411) an active matrix liquid crystal display device with cross-talk compensation of data signals.
- Bitzakidis et al (US 5,798,740) teach a liquid crystal display in which data values are adjusted for cross-talk using other data values in the same column.
- Asari et al (US 5,644,329) teach a display apparatus wherein the light transmittance of a pixel selected by a scanning electrode and a data electrode is changed in response to the difference of voltages applied to the scanning electrode and the data electrodes.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ronald Laneau whose telephone number is 703-305-3973. The examiner can normally be reached on Monday-Thursday from 8:00 AM to 6:00 PM or via email: ronald.laneau@uspto.gov.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Hjerpe can be reached at 703-305-4709.

10. **Any response to this action should be mailed to:**
